

SEMINAL FLUID COLLECTION PATIENT INSTRUCTIONS

**It is important to follow these instructions carefully
to ensure your test results are accurate.**

Preparation

- Obtain the correct bottle from a laboratory collection room.

Collection Procedure

1. Do not have intercourse or masturbate for a minimum of two days, but no longer than seven days, before providing the sample. This allows sperm numbers to build up to normal levels.
2. Wash your hands and penis before collecting the sample, to minimise transfer of bacteria from your skin into the sample.
3. Collect the sample by masturbation into the plastic jar provided. Do not use any form of condom or lubrication. **N.B. The whole sample is required for testing, if you spill any, please obtain a fresh container and collect a fresh sample.**
4. Write your name and the time that you collected the sample on the label of the container and on this form.
5. It is important to keep the sample warm and deliver to the main laboratory **within one hour of collection**. If this is not convenient, continue to keep the sample warm and deliver it as soon as possible to one of the laboratories.
6. Complete the details below, and bring this form with the Laboratory Request Form.

NAME: _____

DOCTOR: _____

When was the sample collected? Date: _____ Time: _____

How many days abstinence have you had? _____

Was any of the specimen spilled? YES / NO

Your results can only be obtained from the requesting doctor
